Emergent Introduces Revolutionary Construction Technology with Ribbon-Cutting Ceremony for First On-Site 3D Concrete Printed (3DCP) Home Completed in California

REDDING, CA—Emergent, a leader in cutting-edge construction technology, is proud to announce the successful completion and ribbon-cutting ceremony for the first on-site 3D Concrete Printed home in the state of California. This monumental event took place on Wednesday, July 12th, near the Reginato Boat Ramp in Redding, CA, and marked a significant milestone in the evolution of construction techniques.

The advent of 3DCP (3D Concrete Printing) technology is transforming the construction industry by revolutionizing how we build homes. With its innovative approach, Emergent creates more durable, energy-efficient, and disaster-resilient homes. It significantly improves construction efficiency with rapid-build technology that revolutionizes how we build and live, while still maintaining costs similar to traditional construction methods. Emergent is at the forefront of this technological advancement, fostering the next generation of construction-technology workers and educating them about the endless possibilities of modern-day construction.

The inaugural Emergent Home represents a collaborative effort between Emergent, AccessHome, the City of Redding, Don Ajamian Construction, and the community at large. This move-in-ready subsidized "host" home will be provided to an eligible family in need, contributing to the ongoing efforts to address housing challenges. The host family will assume specific park-related duties in exchange for housing, creating a permanent on-site presence that enhances security and benefits the local community.

“Emergent is changing the way we build and live,” said Joe Chimenti, Director of Community Development at Emergent. “We are training the new ‘Tech Generation’ of construction professionals.”

The ribbon-cutting ceremony, attended by public officials, media representatives, and strategic partners, symbolized the collective achievement and the vision for the future of construction and the betterment of communities. It served as a testament to the dedication and hard work invested in bringing this groundbreaking project to fruition. The event featured speeches from key stakeholders and a tour of the newly constructed home.

Emergent extends its heartfelt gratitude to the partners involved, including AccessHome, the City of Redding, Don Ajamian Construction, and the supportive community of Redding. Their collaboration, expertise, and unwavering support have been instrumental in making this project a resounding success.

Emergent is headquartered in Redding, CA, and pioneers innovative, fire-resistant, eco-friendly residential and commercial construction. Our solutions offer superior building and disaster recovery capabilities, limitless design possibilities, and optimized construction processes to support community development far and wide.
